Below the Abbey: game balance report

Automated checks of difficulty, levelling, economy and gear, run on the current build (version 3.869 plus the Testing menu). Everything here comes from the game's own formulas (enemyStat, enemyHitC, the shop and gear tables, the experience and gold rules), run by a script in the game page. Numbers are model results, not play tests.

1. Findings in short

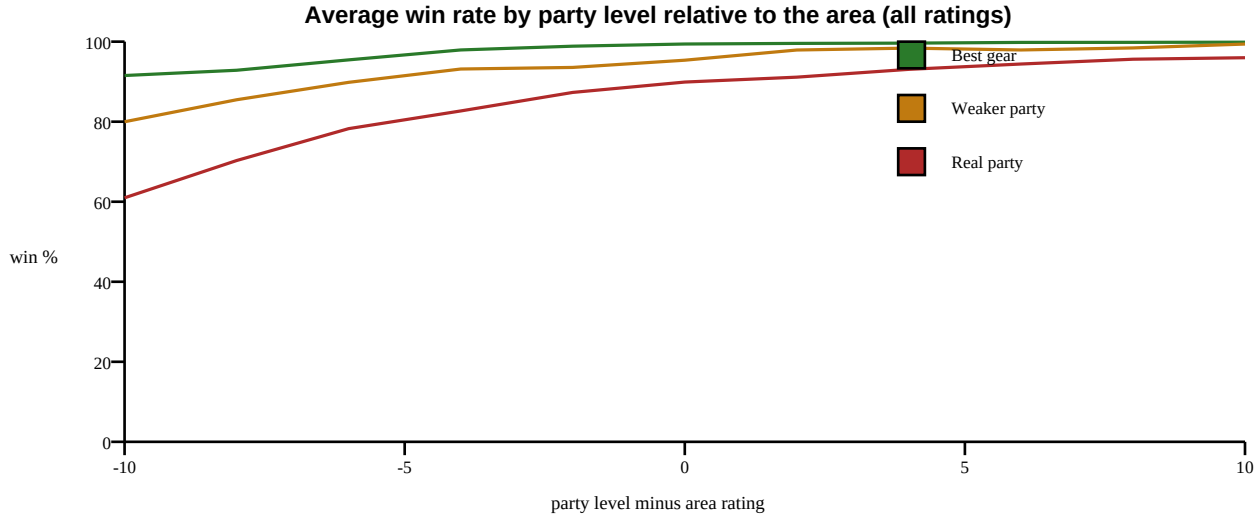

- **Difficulty is flat, with a few sharp spikes.** A best-gear party wins about 92% of ordinary fights even 10 levels below an area and 99% on level, and it loses roughly 19% of its health in a fight at every level from 10 to 100 (30% at 10 levels below, 15% at 10 levels above). There is no real gradient: being under-levelled costs little, being over-levelled hardly helps. The spikes are where the real party (cheap back line) fails on level: ratings 59, 60, 61, 62, 63, 64, 65, 66, 72, 74, 80, 82, 100, 103, 106, 107, 108, 110, 111.
- **Hard spots (bot clears).** Weaker and real parties wipe repeatedly in: The Deeper Hollow (rating 72), The Underlevel (80), Blackbriar Wood (82), The Drowned Maze (74), the Orange Spire (levels 3 to 20, ratings 59 to 65), the Pale Approach and Pale Lands areas (100), the Observatory Gallery (107) and the Stone Planet (108). See section 4.
- **Experience races and then stalls.** Clearing every creature once in rating order, the party reaches level 111 by about rating 63 (ratings 59 to 65, the Orange Spire, pay 5.31M XP between them), long before the last areas (up to rating 120). After rating 77 the XP per kill drops sharply (about 9,700 per kill at level 73 against about 1,500 at level 81), so a level then takes 60 or more kills against 7 earlier. Section 6.
- **Economy.** A full clear of every area earns about 2.28M gold including quests. The three houses cost 1.55M and the six super weapons 600k, together 2.15M, less than the whole story pays. One Large Mansion (1M) is about 44% of all the gold in the game. The best full gear set of a level-110 party costs about 322k. Section 7.
- **Gear ladder has holes.** Dagger and Staff have no shop upgrade after level 40, Sword and Bow stall for 20 levels at a time, armour improves only every 10 levels, shields stop at level 60 and armour at 100. Many items are beaten by something two levels earlier (Sword 19 of 41, Helm 18 of 33, Chest 14 of 29, Ring 26 of 33). Section 8.
- **Fight length.** An ordinary creature takes about 15 hits (one hero attacking) at levels under 20 and about 6 at level 100 and above, so fights get about 2.5 times shorter as the game goes on. No ordinary creature takes more than 20 hits or fewer than 2. 55 bosses can kill an average hero in under 2 of their own hits, the worst being The Pale King (0.4), Old Whiskers (0.9), Cicada Demon (1.0), Fly Demon (1.0). Section 5.
- **Coverage.** Only 65 of the 120 ratings have any creatures. The longest stretches with none: 1 to 3, 20 to 24, 51 to 54, 91 to 99, 112 to 120. A party levelling through these meets no fights at all, which is part of the stall in finding 3.

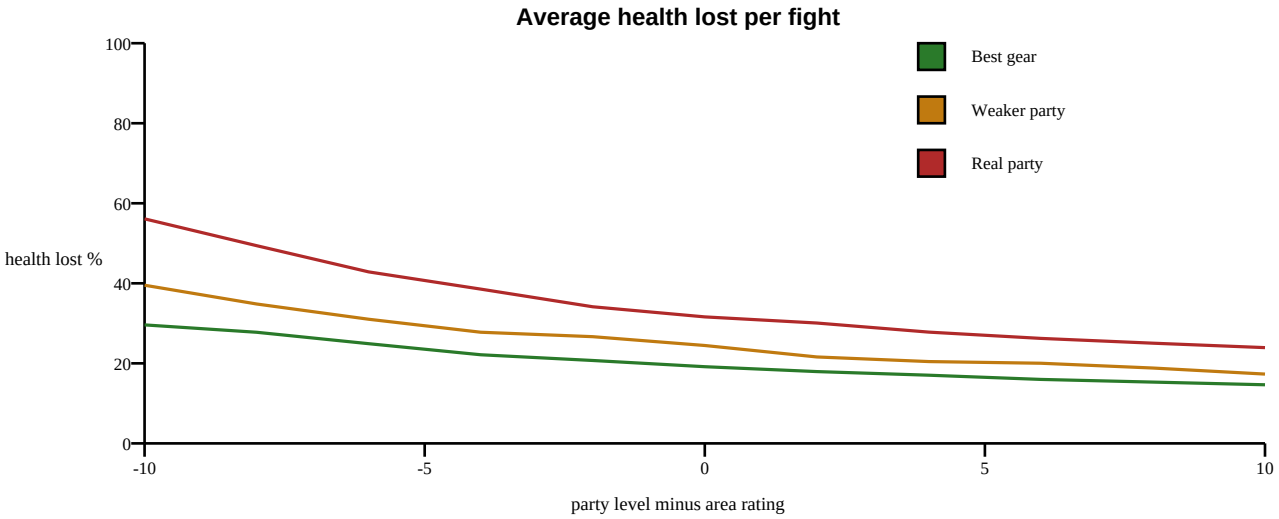

2. Method, and what it cannot tell you

- **Areas.** Every level in the game was loaded and its creature list read (652 levels, 194 with creatures, 65 distinct ratings). A creature stands at its area's rating, an ordinary one 1 below, at or 1 above; bosses and great creatures are never moved.
- **Parties.** Built with the same code as the Testing menu: Warrior, Thief, Mage, Priest at level P. "Best gear" has the best shop gear of the level; "Weaker" has an average weapon; "Real" has cheap and ok pieces, only two good ones, back line cheap.
- **Fight model.** Four heroes against 3 creatures. Heroes use their special power or spell while they have mana, else a plain attack on the front creature; a hero under 35% health drinks a potion; the Priest heals the most hurt ally under 60% while mana lasts. Creatures strike once a round, the two front heroes drawn three times as often. Hit chances, damage, health, armour and dodge come from the game's own functions.
- **Not modelled.** Boss special moves, status effects, fleeing, terrain, ranged positioning, item drops and selling, healing from food and rest in mid-fight, and the exact effects of the many special powers (unknown power types count as 1.5 plain attacks). The Priest heal here is strong (about 64% of a hero's health for 3 mana at level 60), so Priest-light parties are harder than shown. Treat results as relative: a flat curve or a spike is meaningful, the exact percentage is not.
- **Time.** Assumed 5 seconds per fighting round and 25 seconds per fight for walking and menus. Change *SEC_ROUND* and *SEC_FIGHT* in tools/balance/harness.js and re-run to see other speeds.
- **Quests.** Quest rewards are placed on the rating of their area. Quests whose area name does not give a level were placed by hand (Khemetra 40, Wandering Monsters 50, Western Kingdoms 80, Deeper Hollow 72, Blighted Lands 90, Pale Lands 100 to 110, Abbey Depths 70). This affects only the "with quests" curves.
- **Samples.** Win-rate matrix: 300 fights per cell. Bot: 10 full runs of every area per party. Re-run any time with tools/balance/harness.js, then tools/balance/make_report.py.

3. Win-rate matrix

Each cell is the win rate of a party at rating plus the column offset against 3 creatures of that rating. Green 98%+, yellow 90 to 98, orange 70 to 90, red under 70. A healthy game shows a smooth fade from green (over-levelled) to red (far under-levelled), the same at every rating. Instead the best-gear party is green almost everywhere, and the weaker and real parties fall off sharply in a few rows.

Win rate (%) matrix: Best gear

Rating	-10	-8	-6	-4	-2	+0	+2	+4	+6	+8	+10	Areas (first)

4. Autoplay bot: clearing every area

A party of level P clears every area with rating from P-2 to P+2, fighting its creatures in groups of up to 3, bosses last. It rests (full health, potions restocked) when average health is under half or someone is down; a wipe costs a retry (3 tries per group, then the area is "failed"). Totals per party level are summed over the areas of that band; the hours column uses the assumed speed.

Bot, Best gear

5. Damage-to-kill: how many hits each creature takes, and how many it needs

For every creature at the level it appears, against the best-gear party of that level. "Hits to kill" is one hero attacking (average of the four heroes, accounting for hit chance and crits); "rounds" is all four attacking. "Hits to kill a hero" is the creature's own hits (with its hit chance) to bring down an average hero (front fighters weighted 3 to 1) and the front Warrior. Under 2 hits to kill a hero is deadly; over 20 hits to kill the creature is a slog.

Ordinary creatures by level band

Level band	Creatures	Median hits to kill	Median rounds	Median hits to kill a hero	Under 3 (deadly)
0-19	20	14.9	3.7	16.7	0
20-39	41	11.1	2.8	9.0	0
40-59	78	11.2	2.8	6.9	0
60-79	84	10.1	2.5	3.9	0
80-99	188	6.3	1.6	5.2	15
100-119	102	5.7	1.4	3.5	23

6. Experience pacing

Two views. **Full clear:** the best-gear party kills every creature of every area once, in rating order, with the game's XP rule (6% less per level the creature is below the party, 6% more above, at most 50% more) and level cost 15 x L x (L+1). **Steady play:** a party of level L fights the nearest area of rating about L; kills per level and hours per level at the assumed speed.

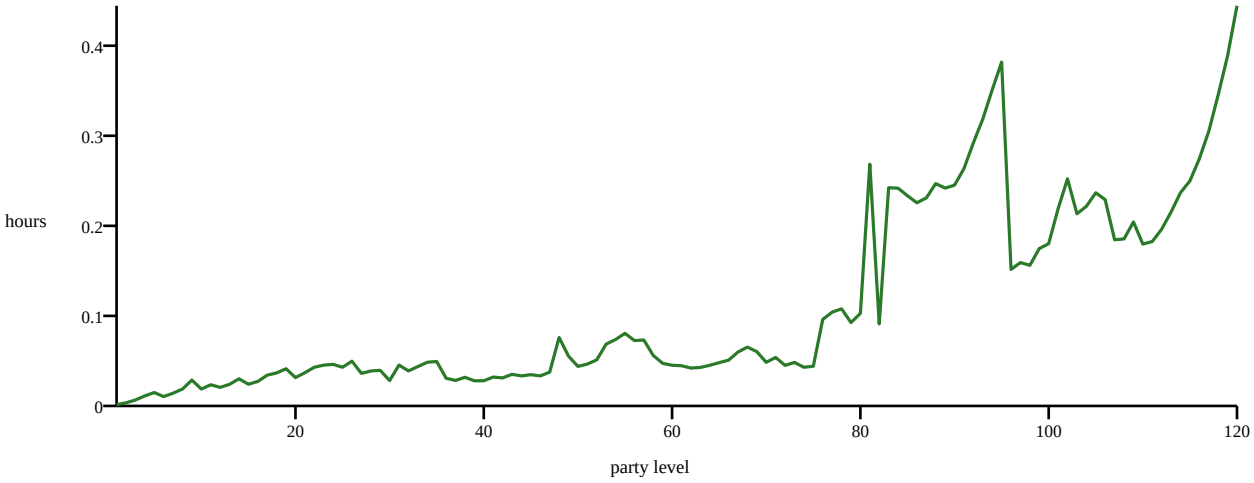

Party level after a full clear of each rating

XP per kill by party level (nearest area)

Hours to gain one level (assumed 5 s per round, 25 s per fight)

Steady play, every second level (orange: nearest area is 4+ ratings away; yellow: over 0.3 hours per level)

Lvl	Nearest rating	XP / kill	Gold / kill	Rounds / kill	Kills to level	Hours to level	Total hours
1	4	234	51	6.5	0	0.00	0.0
2	4	222	42	4.5	0	0.00	0.0

7. Economy

Gold comes from creature drops (the game's own rules, expected value), chest gold lying in the areas, and quest rewards. Item drops and selling items are not counted, so real income is somewhat higher. Costs are the real prices in the game tables.

Gold earned in a full clear (cumulative) against the price of a full best-gear set

Purchase	Price	Share of all gold in a full clear	Hours of steady play at late-game income
Small House	150k	7%	1.8
Medium House	400k	18%	4.9
Large Mansion	1.00M	44%	12.3
One super weapon	100k	4%	1.2
All six super weapons	600k	26%	7.4
Best gear set, party level 50	90k	4%	1.1
Best gear set, party level 80	201k	9%	2.5
Best gear set, party level 110	322k	14%	4.0
Top potion	1800	0%	0.0

Late-game income while levelling (levels 60 to 110, weighted by time) is about 81k gold per hour in this model. The figure swings a lot by area (some late creatures drop nothing; a few pay big), which is itself a flag: gold per hour at the assumed speed is 21k at level 49, 23k at 65, 2294 at 81 and 333k at 105.

Gear price against gold on hand

Party lvl	Full gear set (4 heroes)	Top weapon price in last 10 levels	Median weapon price	Gold so far (full clear, at that rating)
5	4586			1572

Leviathan Maul	106	32k	no
Tidecaller Bow	106	32k	no
Dawnbringer	102	30k	no

8. Gear ladder

Items are grouped by slot (weapons by type). Power is average damage (with double-hit and accuracy) for weapons, armour plus health bonus for armour. "Shop" means not rare, not a set or quest reward. **Dead ends** are items beaten by an item two or more levels earlier. **Gaps** are stretches of 10 or more levels where no shop upgrade appears (levels shown are the item level, from its level field or its price).

Group	Items	Shop	Item levels	Dead ends	Gaps with no shop upgrade (10+ levels)
Dagger	14	11	1-120	1	40-130
Sword	41	31	1-120	19	40-49, 50-69, 110-130
Mace	29	25	1-120	1	5-14, 25-34, 35-44, 50-61, 110-130
Staff	16	11	1-120	1	40-130
Axe	31	28	1-120	10	50-61, 110-130
Bow	33	28	1-120	14	40-49, 50-69, 78-105, 110-130
head	33	29	2-100	18	10-19, 20-29, 30-39, 40-49, 50-59, 70-79
shield	10	9	4-60	2	5-19, 20-29, 30-49, 50-59, 60-130
chest	29	26	4-100	14	10-19, 20-29, 30-39, 40-49, 50-59, 70-79

9. What to look at first, and how to re-run this

- Smooth the rating ladder: 55 of 120 ratings have no creatures, and the Orange Spire (ratings 59 to 66) pays enough XP to jump the party past most of the later areas. Cutting its XP or moving some of it later flattens the race.
- Decide what the late game is for: after rating 77 creatures pay about a sixth of the XP per kill, so levelling nearly stops. If that is intended (the party is meant to stop levelling near 110), the Testing party levels 105 to 115 are the right range; if not, raise late creature XP.
- Rebuild the spikes: Deeper Hollow (72), Underlevel (80), Blackbriar Wood (82), Drowned Maze (74), Pale areas (100) and the Stone Planet (108) beat parties that handle their neighbours. Lowering their damage or health one notch evens the curve, or give those areas a clearer level warning.
- The best-gear party is untouched almost everywhere: it wins 100% even 10 levels down. If you want gear and level to matter more, creature damage should rise faster per level than hero health, or armour should cut fewer hits.
- Fill the gear holes: a shop Dagger and Staff for levels 40 to 120, Sword, Bow and Mace steps for the long gaps, shields past 60, armour past 100.
- The super weapons and houses together are 2.15M, against 2.28M that a full clear pays (a gear set for the party costs another 0.3M). That is fine as a post-game goal if intended; if not, scale prices or add a gold source after the story.
- Re-run: start the game page on a local server, open the browser console, load *tools/balance/harness.js*, call *BALH.harvest()* then *await BALH.stage('matrix', 300)* and the same for *bot, kills, xp, pace, economy, gear*, with a receiver on port 8914 saving the JSON; then run *make_report.py* on that folder.

Appendix: every creature (ordinary and boss)

Hits to kill the creature (one hero) and hits it needs to kill an average hero, for the best-gear party of the creature's level. n is how many stand in the game.
